

## Industrial Cleaning and Commissioning Specialists

Elden Consulting and Industrial Services is a global provider of system commissioning and cleaning services for multiple industries.

We seek to combine state of the art equipment with experienced and efficient engineered solutions for rapid deployment and minimal downtime.

Our solution saves our customers both time and money while delivering a superior service.

### COMMERCIAL

From skyscrapers to sprawling self sufficient private communities, the delivery of water and removal of waste products requires ongoing maintenance to ensure optimum efficiency. From initial commissioning to scheduled maintenance or even emergency response, Elden Industrial has the solutions.

### INDUSTRIAL

Whether your company operates a single manufacturing installation or is a multi-national pharmaceutical company, Elden Industrial is able to provide cleaning and startup services to meet your needs.

### POWER

Coal, oil, biomass, natural gas, or nuclear power production facilities all have similar needs when it comes to commissioning and regular maintenance. Our experience has allowed us to develop efficient and cost-effective solutions to meet your needs with minimal downtime and no hidden fees.

### MUNICIPAL

The challenges faced by municipalities are many. However, they don't have the luxury of waiting until a problem arises to take action. Elden Industrial's solutions can help maintain the viability of municipal water and sewage systems without the inflated price tag associated with some other companies.

Pressure Tests ● Turbulent Aerated Pig (TAP™) Flush ● Chemical Clean ● Descale  
Boilout ● Low Pressure Steam Blow ● Heat Exchanger Cleaning

## EXPERIENCED IMPLEMENTATION

- Executed 45 large scale projects world-wide
- Average cost of \$1.0M
- Commissioned 20.2GW to power grids
- Over 20 years of engineering and field operations
- PE licensed
- OSHA safety trained

## Commissioning Services

- TAP Flush™ - High velocity aerated water slug flush for process piping
- Boil-out & eco-friendly clean/degrease of boilers and process piping
- Chemical clean
- Pressure testing
- Steam blow
- Process drying of piping
- Fuel gas/fuel oil systems
- Condenser cleaning & commissioning

## Maintenance Services

- Descale of water and process piping
- Improve efficiency in the heating or cooling system
- Heat exchanger cleaning
- Scheduled outage cleaning
- Post tube replacement cleaning
- Emergency maintenance
- Grease removal
- Routine flushing of water distribution networks / force mains

## ENGINEERED EFFECTIVELY

Not Over Engineered. Our methods have been developed to reduce your cost while providing a rapid and effective turnaround to hit your project milestones. When designing your custom solution, we carefully consider and seek the most efficient method to meet your needs. During implementation, we come on-site and work directly with your personnel. By leveraging the knowledge of your current resources who have an intimate understanding of the facility, we reduce your cost and overall implementation time.

## LESS EQUIPMENT = LOWER COST

To meet your needs, we design our engineering solutions with careful consideration given to incorporating locally or on-site equipment availability. While other firms run up their profits by forcing customers to use their equipment, we feel that the same or even better results can be achieved by integrating existing hardware on the site or sourcing locally. This saves you money, time, reduces waste, cuts transportation costs and reduces unexpected barriers to completion. Our strength is our process.

## EXPERIENCED ENGINEERING

Our implementation experience and knowledge allows us to provide rapid and accurate quotes so you can move forward with your project. Most projects can be engineered in less than 2 weeks and submitted for your approval well in advance of the need. Additionally, our engineering team has amassed considerable experience in the field allowing us to rapidly respond to the changing needs of our customers and their projects.
